

BELLA® BLUE

The science of great sod.

DWARF VEGETATIVE BLUEGRASS

Bella Blue – The Intermountain West's only less mowing Kentucky Bluegrass.

For use on

Bella Kentucky Bluegrass was developed at the University of Nebraska and is characterized by improved drought and shade tolerance, dwarf and dense growth habit, dark green foliage, shorter leaves, and vegetative only propagation.

Bella was screened for high temperature and drought resistance, shade tolerance, low nitrogen requirement, infrequent mowing, adaptability to a wide range of soils, aggressive rhizomes and repair-ability, performance under drought conditions, dark green genetic color, spring green-up, and adapted use in cool-arid climates.

Color

- Deep dark green

Texture

- Medium

Climate

- USDA Zones 3-9

Shade tolerance

- Good – up to 60%

Maintenance

- Low level of maintenance
- Responds well to organic and natural lawn care

Mowing

- 1 inch to un-mowed
- Mow every 2-3 weeks or less

Performance

- Excellent color in heat and cold.
- Early spring green up.
- High density resists weeds.
- Heat and drought resistance.
- Environmentally sensitive.
- Low mowing requirement.
- Good in shade.
- Natural dark green color.

Options

- **Regular sod:** 2' x 5' long rolls with 1/2" of soil. Ideal for most installations.
- **Big Roll sod:** 30" x 80' with 1/2" soil. Great for large installations.
- **Installation:** We can install your new Bella Blue sod. Our specialized crews will install your new Bella Blue sod professionally.

BELLA
BLUEGRASS
HEAT TOLERANT • LESS MOWING

Bella Blue and Biograss Sod Farms

For years, BioGrass Sod Farms has been the leader in the identification, research, development, and marketing of superior turf grass varieties. BioGrass sod varieties vary in color, texture and other features, but they all have one thing in common: lower water and maintenance needs.

The Intermountain West's first Bella Bluegrass trials were established at the Biograss Test Farms in the Fall of 2005. Bella has been subjected to rigorous tests to determine adaptability to the harsh conditions of the high desert of the Intermountain West.

For less mowing, specify Bella Blue from Biograss Sod Farms.

Performance studies compared to other Kentucky Bluegrass varieties:

- Minimal vertical growth – about 4 inches.
- Reduces mowing 50%-80%.
- Drought and heat tolerant.
- Rapid horizontal growth – fills in quickly.
- Excellent injury recovery.
- Vegetative growth provides excellent erosion control.
- Shade tolerance – up to 60%.
- Dark green alpine color.
- Vegetatively propagated.
- Great for high use parks and athletic fields.
- Use on low maintenance and un-mowed areas.
- Excellent fall color and spring green-up.
